Logic for Lawyers

An Introduction

eleven

Table of Contents

1	Dare to think	9
1.1	The argument	9
1.2	Why should lawyers learn logic?	10
1.3	How to read this book	12
1.4	How to learn logic	13
PART I – INTRODUCTION TO LOGIC FOR LAWYERS		15
2	<i>Pro-et-contra</i> surveys	17
2.1	Bulls**t	17
2.2	<i>Pro-et-contra</i> surveys	18
2.3	How does a <i>pro-et-contra</i> survey work?	18
2.4	Assessment	23
2.5	Clarity and vagueness	25
3	The syllogism	27
3.1	Introduction	27
3.2	Syllogisms	27
3.3	Formal and material truth	30
3.4	The syllogism and the law	31
3.5	Syllogisms and fallacies	37
3.6	Conclusion	38
4	Fallacies	39
4.1	Introduction	39
4.2	<i>Non sequitur</i> (incorrect deduction)	40
4.3	<i>Secundum quid</i> (induction or hasty generalisation)	41
4.4	<i>Post hoc ergo propter hoc</i>	43
4.5	Affirming the consequent (abduction)	44
4.6	Analogy	45
4.7	<i>A contrario</i>	47

4.8	<i>Argumentum e silentio</i>	48
4.9	Hidden premise	48
4.10	Slippery slope	49
4.11	<i>Argumentum ad absurdum</i>	50
4.12	Excluded middle (false dilemma)	50
4.13	<i>Petitio principii</i> (circular reasoning)	51
4.14	Amphiboly	51
4.15	<i>Argumenta ad 'X'</i>	52
4.16	Conclusion	55
5	A formal language	57
5.1	Lawyers and language	57
5.2	Syntax, semantics and pragmatics	57
5.3	Truth	59
5.4	Consistency	60
5.5	Validity (and deducibility)	60
5.6	Logical strictness	61
6	Propositional logic	63
6.1	Connectives	63
6.1.1	Conjunction	63
6.1.2	Negation	65
6.1.3	Disjunction	66
6.1.4	Implication	69
6.1.5	Equivalence	73
6.2	More complex formulas	75
6.3	Exhaustiveness	78
6.4	Truth values	79
6.5	Translation and interpretation	82
7	Testing consistency and validity – The tableau method	85
7.1	Introduction	85
7.2	From truth tables to tableaux	85
7.2.1	Conjunction	86
7.2.2	Disjunction	87
7.2.3	Implication	87
7.2.4	Equivalence	88
7.2.5	Negation and composite formulas	88
7.3	More complex formulas	90
7.4	Testing consistency	91
7.4.1	Linking tableaux and closing branches	92

7.4.2	How to read tableaux	93
7.4.3	Astute construction	93
7.4.4	Hidden inconsistencies	95
7.5	Testing validity	95
7.6	Remarks on validity	97
7.6.1	Ex falso sequitur quodlibet	97
7.6.2	The formal nature of validity	98
7.7	The truth table method	99
7.7.1	Consistency test	100
7.7.2	Validity test	101
7.8	Conclusion – what is a good argumentation?	104
8	Logic and rhetoric	105
8.1	Being versus appearing	105
8.2	Means of persuasion	106
8.3	The enthymeme (logos)	108
8.3.1	Persuasion is a dual activity	108
8.3.2	Example from legal practice	110
8.3.3	The moment	111
8.3.4	Final remark about the enthymeme	112
8.4	The logic of persuasion	112
8.4.1	The speaker's character (ethos)	112
8.4.2	Emotion as a means of persuasion (pathos)	114
8.5	Rhetoric: conclusion	115
8.6	Part I: conclusion	115
	PART II – EXTENSIONS AND ALTERNATIVES	117
9	Modern logic	119
10	Predicate logic	121
10.1	Introduction	121
10.2	Vocabulary: predicates and constants, quantifiers and variables	122
10.2.1	Predicates and constants	122
10.2.2	Quantifiers and variables	122
10.3	The discussion domain: sets	125
10.4	Quantifier properties	126
10.4.1	Qualifiers and negation	126
10.4.2	Quantifiers and connectives	128
10.5	More complex sentences	129

10.5.1	Relational predicates	129
10.5.2	Several quantifiers in one proposition	130
10.5.3	Quantifier scope and variable binding	130
10.6	Consistency testing	131
10.7	Validity testing	136
10.8	Validity and consistency of complex sentences	137
10.9	Identity	140
10.10	Conclusion	143
11	Modal logic	145
11.1	Introduction	145
11.2	The Aristotelian square of opposition	145
11.3	Epistemic logic	146
11.4	Deontological logic	147
11.5	Modal logic	149
11.6	Combining modal operators	150
11.7	Part II: conclusion	151
	POSTSCRIPT AND APPENDICES	153
12	Postscript – The value of not knowing	155
	Appendix I – Truth tables	157
	Appendix II – Rules of inference for the tableau method	159
	Appendix III – Stepwise testing of consistency and validity using the tableau method	161
	Appendix IV – Rules of inference in natural deduction: propositional logic	163
	Appendix V – Rules of inference in natural deduction: predicate logic	175
	Appendix VI – Suggestions for further reading	179
	Word of thanks	183
	References	185
	Index	189

logic for lawyers offers an introduction to logic, tailored to legal practice.

logic is a basic tool for the legal professional. Law is an argumentative practice and therefore lawyers need to know how to argue. This book discusses the classical topics of logic – schemes of argumentation, syllogisms, fallacies and propositional logic – always with the use of practical legal examples. This book pays special attention to the role of logic in rhetoric too, as any lawyer would want others to accept the argument.

Furthermore, this book has an in-depth section which discusses insights from modern logic – such as predicate logic and modal logic – again while using practical legal examples.

This makes it an indispensable reference work for every legal practitioner.

Jonathan Seahorne is left professor of administration of justice and legal philosophy at the University of Amsterdam (the Netherlands). He is also a practicing lawyer and an acting court of appeal judge (supreme chamber). He holds degrees in law, theology and philosophy. His academic work focuses on ethics, integrity, judicial decision-making, disciplinary systems, logic and rhetoric. He is involved in the professional education programmes of lawyers, judges and public prosecutors.

Daniël Stein holds degrees in both law and philosophy. After having worked as a lawyer (admitted to the Amsterdam bar) for a number of years, he is now completing his PhD in law at Radboud University Nijmegen (the Netherlands). His academic work mainly focuses on the law of abstractions, property law, monetary law and logic.

In collaboration with Sjoerd Oppenheim.
